ABSTRACT:

CHG DATE=20061117 STATUS=C>There is provided a job control system for a
document processing system having a document processing subsystem in which a
job, including a set of image data and a job control ticket, is processed
each time the job, along with the job control ticket, is submitted to the
document processing system. The job control system includes ¢ an input source
including a user interface with a display, the user interface being used to (a)
program a first job control ticket with a first set of attributes, the first
job control ticket controlling a manner in which the job is to be
processed in a first job processing event, and (b) program a second job
control ticket with a second set of attributes, the second job control ticket
controlling a manner in which the job is to be processed in a second job
processing event; and ¢ a linking program for causing the first and second job
control tickets to be linked to the set of image data so that a single
submission of the job by the user causes the job to be processed in the
first job processing event with the first job control ticket and in the
second job processing event with the second job control ticket, wherein the
user need not submit the job to the document processing subsystem multiple
times.
